22 years

I am an Information Technology graduate, vast in areas of software development. Being open minded has helped me achieve a lot of technological skills during my education in school. I was able to design several projects back in school, this has enabled me to acquire great knowledge in problem solving. Currently, I am looking for a job where my skills can be put in the real world.

EXPERIENCE

ATTACHMENT - iRob Tech (A software Company in Nairobi)

Back when I was in my 3rd Year I was able to sharpen my skills in **Mobile App Development** from this company. **GitHub** became a familiar tool for me, where git commands became much easier for me to understand. **Flutter** was dominantly used in this company, I was obliged to learn and understand it, prior to my previous knowledge in **Java**, which I was taught in school.

PERSONAL EFFORT

From my attachment I got this unquenchable queue to deeply dive into software development, I started learning new technologies such as **React**, and managed to build my own personal website portfolio (<https://mwichabe.github.io/myPortfolio/>). From this self drive I expanded my development skills and got to learn about cloud pages, **CloudFlare** , where I was able to host my personal website projects for free. After gaining good knowledge in the FRONT END stack, I got this urge to get a bit knowledge in the backend side of development, this is where my journey in **Java SpringBoot** began.

PROFESSIONAL EXPERIENCE

I have interacted with some companies in my journey.

KontorVA (<https://www.kontorva.com/>)- Talent pool member, I am a flutter developer here.

Payvost(<https://payvost.com/>) - FrontEnd engineer, flutter.

Currently, I am looking for a job where my skills can be useful, I prefer a hybrid or onsite official setting.

PROJECT

Best Candidate Mobile Applications

This is a mobile application designed to help job seekers craft their Cvs, from the applications users can have their cv automatically generated according to the platform's layout. This application will be on play store soon enough. Visit it's website for more information :
